CAREER OBJECTIVE

Detail-oriented and self-driven professional with 3 years at Amazon in a process-driven environment, recently transitioned into QA Automation and SDET skillset. Proficient in JAVA, Selenium, TestNG and API Testing, passionate about building scalable automation framework and improving software quality through technical innovation.

WORK EXPERIENCE

Amazon Development Center (India) – Process Associate / QA Trainee

May 2022- Present

- Responsible for product mapping and data validation by identifying equivalent items across third-party e-commerce websites and linking them with Amazon catalog listings to enable accurate price comparison and scraping automation.
- Selected for **Amazon's ATLAS QA Program**, a 4-month technical transition initiative into QA/SDET roles.
- Designed and executed automated test cases using **Java, Selenium WebDriver, and TestNG**.
- Developed Page Object Model (POM)-based framework to support regression and smoke testing.
- Collaborated with QA mentors to implement **data-driven testing** with external Excel data sources (Apache POI).
- Performed **API Testing** using Postman and **automation with RestAssured**.

Projects

End-to-End Automation Framework (Personal Project)

Tech Stack: Java | Selenium | TestNG | Maven | Jenkins | Allure Reports | GitHub

- Built a **hybrid data-driven + POM framework** for a sample banking web app.
- Implemented reusable components for login, register, and find transactions.

https://github.com/shawrahul0904/ParaBank_Automation.git

Java OOPs Project – Attendance Management System

- Built a console-based attendance tracker using Core Java and OOP principles.
- Used Collections and custom exceptions for data validation and efficient in-memory operations.
