Contact No : +91- 9146833385
Email ID : ssahu212@gmail.com
Location : NAGPUR

OBJECTIVE:

Skilled DevOps Engineer with 9 years of experience designing and implementing automated solutions for managing and deploying applications on AWS Devops POWER platforms. Skilled in orchestrating deployments and releases across different environments. Proficient in configuring and optimizing AWS services to support scalable and resilient architectures. Skilled in managing Linux-based systems and ensuring their security, performance, and reliability. Adept at troubleshooting complex issues and implementing solutions to improve operational workflows. Strong team player with excellent communication skills, committed to delivering high-quality results and driving innovation within the organization.

PROFESSIONAL EXPERIENCE

Designation	:	IT ANALYST
Organization	:	TATA CONSULTANCY SERVICES
Duration	:	October 2022 to till date
Designation	:	APPLICATION DEVELOPMENT SENIOR ANALYST
Organization	:	ACCENTURE SOLUTIONS Pvt Ltd
Duration	:	July 2021 to October 2022
Designation	:	SENIOR ANALYST
Organization	:	HCL TECHNOLOGIES
Duration	:	AUGUST 2019 to July 2021
Designation	:	SERVICE DESK ENGINEER
Organization	:	NET CONNECT Pvt Ltd
Client	:	TCS (PWC)
Duration	:	February 2018 to July 2019
Designation	:	PROCESS EXECUTIVE
Organization	:	INFOSYS Ltd
Duration	:	December 2016 to February 2018

ACADEMICS

- Bachelor of Engineering from GNIET, Nagpur University in 2015.
- HSC at KV VSN, Nagpur in 2011.
- SSC at KV VSN, Nagpur in 2009.

TECHNICAL SKILLS:

- Linux Server Administration & AWS

- Ansible with Ansible Tower Managing Ansible playbooks, inventories, and schedule jobs to run using the web interface.
- Ansible Vault for saving sensitive data.
- Docker Containerization & Docker Hub
- Source Repositories: GITHUB, Bitbucket
- CI/CD Tool – Jenkins, AWS Codepipeline
- Monitoring Tools: AppDynamics, Mulesoft, Cloudwatch, Coralogix
- Agile: Scrum, JIRA , Service Now
- Kubernetes
- Terraform Cloudformation

WORK EXPERIENCE:

DevOps:

- Experience in creating and managing of Linux servers, EC2 instances cloud (AWS).
- Proficient in Aws services (S3, SQS, IAM, Route 53, Ec2, ELK, EBS, EFS, Cloud watch, RDS, Load balancers, Security Groups, VPC, VPN, API Gateway, Internet Gateway, Transit gateway, AMIs, auto scaling, Cloud Formation)
- Understanding of CI/CD practices and hands-on experience in implementing end-to-end CI/CD pipelines. Proficient in setting up and configuring build and deployment automation using tools like Jenkins, GitHub CI/CD, or similar.
- Used IAM for creating roles, users, groups based on project and organization with MFA to provide additional security.
- Experience in creating Multiple Vpc and public, private subnets as per requirement and distributed them in groups into various availability zones.
- Experience in maintaining the cloud formation templates for custom Vpc, Subnets, Nat based on client requirements.
- Maintained the monitoring and alerting of production and corporate servers using cloud watch service.
- Used security groups, Network Acl's, internet gateways and route tables to ensure a secure zone of organization in public cloud.
- Configured S3 buckets with various life cycle policies to archive the infrequency accessed data on storage class based on requirement.
- Technically understanding the requirements from the customer and checking the feasibility from the different tools and making the solution part.
- Worked on CI/CD tool Jenkins to automate the build process from version control tool into testing and production environments.
- Experience in doing the ppe, Production deployment for the Hybris and Mulesoft (any point platform).
- Troubleshooting the CI, QA related Jenkins builds while develops merge the code from feather branches to the master branch where auto trigger has configured.
- Ensuring the artifacts has uploaded to nexus for ppe, production deployment after regression and smoke testing done on lower environments.
- Ensuring/taking action for alerts/Events/activity from Rackspace and appdynamcis tool
- Automated daily tasks In Linux OS like file system creation/deletion, disk space addition/reduce, CPU and memory Utilization, package installation through the Ansible.
- Creating the Jenkins seed jobs and Branch jobs for deployment purpose and responsible for continuous integration and continuous delivery process using Jenkins with bitbucket from scratch.
- Written the ansible Playbooks for the VMware use cases like Provisioning, Snapshots, Reboot.
- Experience in integration with service now for alert management like ticket creation, deletion, update. And written playbooks for Cisco switch & routers.
- Participated in CI/CD pipelines: code changes pushed to GitHub → manager approval → automated pipeline execution in a dedicated AWS CI/CD account (limited access) → deployment to dev/QA/prod environments using autoscaling groups.
- Created the docker images for the application deployments by writing the docker files and managing through DOCKER HUB.
- Experience in installing of Jenkins and the administration tasks like addition of new users, enabling and configuration of pipelines with integration with Bitbucket and maven tool.
- Creating the docker images with help of writing docker file for developed code.
- Maintaining the Git and bitbucket repository and troubleshooting issue to help development team to push the code and merge with feature branches.

- Managed service requests and operational queries received from customers via multiple communication channels.
- Ensured strict adherence to Service Level Agreements (SLA) and quality standards. Documented case details, resolution steps, and outcomes in internal tracking/ticketing systems.
- Collaborated with development and operations teams to streamline processes and improve overall efficiency, resulting in faster time-to-market. Coordinated with internal technical and support teams to resolve complex cases.
- Transitioned post-Denodo decommissioning to PowerApps administration: handled user license requests, security group access provisioning for applications (Information Certification, Gastech, Carbon Out, Disposition), and created documentation for PowerApps/Power Automate flows and enhancements.
- Conducted training sessions on DevOps best practices for the team, promoting knowledge sharing and adoption of automation techniques.

LINUX:

- Installed, configured, and updated Linux machines, with Red Hat, and Centos.
- Package management like Install, remove update and querying packages through RPM, YUM.
- Created shell scripts and corn jobs that monitored and reported security issues.
- Managing File Systems like creating a partition mounting and File system check.
- Experience in whitelisting the IPs from the akamai portal for providing access for third parties teams to access the testing environments configured in the project.
- Troubleshoot and resolved connection errors, scheduler job failures, and performance issues; executed maintenance SQL commands (VACUUM FULL, VACUUM ANALYZE) on cached views/tables via DBeaver with SSH tunneling.
- Performed end-to-end Denodo administration across dev, QA, and prod environments: daily accessibility checks for Denodo Portal, Solution Manager, and Virtual DataPort (VDP); monitored scheduler jobs for successful execution.
- Deployed VQL files received from development teams into production; created virtual databases, configured data sources, caching, and user privileges.
- Provided L1/L2 application support via ServiceNow chat for UNUM users.
- Resolved Microsoft Outlook and Office-related issues (login, sync, access, configuration).
- Monitored system performance and resource utilization, optimizing infrastructure for cost and efficiency.
- Participated in on-call rotations, responding to incidents and performing root cause analysis to prevent future occurrences. Used ServiceNow for incident logging, tracking, prioritization, and resolution.
- Followed ITIL processes, security guidelines, and client compliance standards.
- Developed and maintained documentation for infrastructure, processes, and best practices.

CERTIFICATION:

- AZ-900 FUNDAMENTALS.
- AWS SOLUTION ARCHITECT ASSOCIATE

HONOR AWARDS:

- APEX award for FY22 from Accenture level.
- Applause for Team Award – TCS GEMS, 2024
- On the Spot Team Award – TCS, 2025

Personal Details:

Father's Name : Mr. Sandeep Sahu
 Date of Birth : 8th October 1993
