

Kavana B

JAVA SPRING BOOT DEVELOPER

✉ kavanab402@gmail.com 📞 +91 9945537345 📍 Karnataka, India.

SUMMARY

A dedicated Java Developer with 4+ years of experience specializing in Spring applications, Spring Boot, and web services. Proven expertise in enhancing web services, managing batch jobs, and debugging production issues.

Skilled in Microservices, Spring Batch, and AWS. Adept at using REST API, Spring Data JPA, and maintaining code quality. Experienced with Amazon Web Service, Postman, Splunk, Jira. Certified in multiple technologies and experienced in working with REST-based web services, relational databases (PostgreSQL/MySQL), writing unit tests using JUnit/Mockito, and supporting CI/CD pipelines with Jenkins.

SKILLS

- Java
- Core Java
- Spring Boot
- Microservices
- Spring Batch
- Splunk
- AWS
- Postman/Bruno
- Jenkins
- Jira

PROJECT EXPERIENCE

Java Backend Developer
Infosys Feb 2022 - Present

Project 1:- API Development (September 2022 – August 2024)

Technology Used: Java, Spring boot, Spring Batch, Microservice, Jenkins, Postman.

Achievements:

- Developed high-performance APIs using Spring Boot, handling 1M+ daily requests with sub-200ms latency.
- Reduced batch job processing time by 10% using Spring Batch.
- Implemented microservices architecture that improved system scalability and reduced deployment time by 10%.
- Built and deployed applications using CI/CD pipelines.
- Streamlined API testing with Postman, Junit and Mockito achieved code coverage of 100%.
- Develop JUnit test cases to enhance code coverage.
- Worked with PostgreSQL and MySQL databases for efficient data handling.

Project 2: Nike Supply Chain Logistics – Freight Audit Payment (FAP) (October 2024 – present)

Technologies Used: Java, Spring Boot, Spring Batch, REST API, Microservices, Bruno, AWS.

Achievements:

- Contributed to backend development for global supply chain logistics application.
- Enhanced API response time by 15% through optimization of RESTful APIs using Spring Boot.
- Optimized database performance with PostgreSQL, increasing query efficiency by 10%.
- Monitoring the service with logs and the tool called Splunk
- Supported invoice processing for inbound and outbound logistics vendors.
- Improved accuracy, data consistency, and processing speed of logistics invoices.
- Design and develop RESTful APIs using Spring Boot and Microservices architecture.
- Implement business requirements from high-level and low-level design documents.
- Perform unit testing using JUnit and Mockito to ensure code quality.
- Worked with PostgreSQL and MySQL databases for efficient data handling.

EDUCATION

M.Tech – Digital Communication S Networking | UBTD College of Engineering

B.E – Electronics S Communication Engineering | HMS Institute of Technology

CERTIFICATE

Full stack Java Developer

Infosys certified Java SE8 Developer

Infosys certified Spring Microservices Developer
